Sivakorn Khundilokrattaya

Computer Engineering Student · Seeking a Data Science Internship

Python projects in credit risk and fraud review, with a focus on model evaluation and explainable scoring.

Bangkok, Thailand | sivakorn.khun@gmail.com | svkhun.vercel.app | github.com/svkhun | LinkedIn | Kaggle

SKILLS

Modeling	Python, LightGBM, PyTorch Geometric
Evaluation	Cross-validation, baseline comparisons, average precision
Prototyping	FastAPI, ONNX Runtime, React, Git
Languages	Thai, English (CEFR B1)

PROJECTS

2026
KBTG Kampus Hackathon

K-NEXUS - FlowSense & TrustGraph

App / Showcase

- Designed, built and pitched a prototype for cash-flow planning and recipient-risk review. Selected for the Top 10 in Data Science and Top 30 overall at the KBTG Kampus Hackathon.
- Built a graph using only past transactions. On 1,354 synthetic transactions, the graph model scored 0.994 average precision versus 0.996 for the simpler baseline.
- Kept forecasting ML disabled after testing 30-day forecasts on 32 synthetic accounts. Mean absolute error was 2,701.6 versus 313.3 THB per account-origin for the baseline.

2026
Research Prototype

Credit Risk Scoring & Explainable AI

GitHub

- In five-fold stratified cross-validation, an Optuna-tuned LightGBM model ranked default risk with a ROC-AUC of 0.7854. The logistic regression baseline used weight-of-evidence features and scored 0.7420.
- The research scorecard pairs each score with its main contributing factors (TreeSHAP) and examples of how different inputs could change it (DiCE).

2026
Independent Prototype

Shopee Smart COD & Adaptive Checkout

GitHub

Independent project using simulated orders, with no Shopee affiliation.

- A calibrated random forest estimates delivery failure risk. A FastAPI service combines that estimate with buyer history to select a checkout option, from a reminder to a deposit or prepayment.
- On 3,500 held-out synthetic orders, the model achieved a ROC-AUC of 0.840 and average precision of 0.306. At a 15% probability threshold, it flagged 50 of 91 failed deliveries and raised 126 false alarms.

EDUCATION

Undergraduate
Expected 2028
Bangkok, Thailand

Srinakharinwirot University - B.Eng. in Computer Engineering

- **NHK Spring Scholarship (2026-2027):** 30,000 THB per year.

MORE PROJECTS

2026
IoT Prototype

Industrial IoT Telemetry & OEE Data Platform (Simulated Telemetry) GitHub

Python, FastAPI, PostgreSQL 15, WebSockets, LightGBM, TreeSHAP, React 18

- A Python simulator sends machine readings to FastAPI. The service stores them in PostgreSQL and streams updates to a React dashboard over WebSockets.
- Hourly summaries break overall equipment effectiveness into availability, performance and quality. Anomaly views pair model flags with feature contributions for inspection.

2025
National finalist (team entry)

Long Overdue Debtor (LOD) Prediction GitHub

- The team used financial ratios and missing-data indicators to rank 12-month overdue-debt risk. Its public repository reports an out-of-fold ROC-AUC of 0.653 for the CatBoost/LightGBM blend versus 0.633 for the baseline.
- The team compared probability and rank blending on stratified out-of-fold predictions. A public synthetic example lets reviewers inspect the preprocessing and blending steps.

Dashboard Prototype

GuardianAI Clinical Frailty Triage Dashboard GitHub

React, Vite, Node.js, Tailwind CSS, Thai / English Localization

- A bilingual dashboard uses example patient profiles to show risk factors, review alerts and assign follow-up tasks. The dashboard has not been clinically validated.

2026
Interface Case Study

SWU Open House 2026 Web Platform Enhancement Case Study

- The responsive interface organizes registration into three steps and lets visitors browse faculty posters before the event.

HONORS

Nov 2026

KBTG Kampus Hackathon 2026 - Top 30 Overall & Top 10 Data Science

Pitcher, Developer & Concept Lead · Conceived the K-NEXUS product architecture and delivered the stage pitch at Kasikorn Business-Technology Group.

Dec 2025

AIRA & AIFUL / Aihack Thailand 2025 - National finalist (team entry)

Long-overdue debtor modeling competition.

2026

NTT DATA Challenge 2026 - Top 24 team (WELLYNC)

Team recognition. Project repository maintained by teammate Panupong-xD.

ASSESSMENTS

Mar 2026

SKILLKAMP by KBTG - Data Analyst Assessment (STAMP)

97/150 (report average 90). Selected scores include 23/30 in data cleaning and preprocessing and 20/30 in exploratory analysis and visualization.

Mar 2026

SKILLKAMP by KBTG - Digital & Performance Marketer (STAMP)

98/150 (report average 94).

Jun 2026

Oxford Placement Test - English Placement (AUA / Oxford University Press)

Overall score 51 (CEFR B1).
