Sivakorn Khundilokrattaya

Computer Engineering Student · Seeking a Data Science Internship

Python projects in credit risk and fraud review, with a focus on model evaluation and explainable scoring.

Bangkok, Thailand | sivakorn.khun@gmail.com | svkhun.vercel.app | github.com/svkhun | LinkedIn | Kaggle

SKILLS

Modeling	Python, LightGBM, PyTorch Geometric
Evaluation	Cross-validation, baseline comparisons, average precision
Prototyping	FastAPI, ONNX Runtime, React, Git
Languages	Thai, English (CEFR B1)

PROJECTS

2026
KBTG Kampus Hackathon

K-NEXUS - FlowSense & TrustGraph

App / Showcase

- Designed, built and pitched a prototype for cash-flow planning and recipient-risk review. Selected for the Top 10 in Data Science and Top 30 overall at the KBTG Kampus Hackathon.
- Tested a graph model on 1,354 synthetic transactions. The baseline ranked flagged cases more accurately. Kept forecasting ML disabled after a separate baseline also performed better on 32 synthetic accounts.

2026
Research Prototype

Credit Risk Scoring & Explainable AI

GitHub

- Five-fold cross-validation compared two models for ranking credit default risk. LightGBM achieved a ROC-AUC of 0.785 versus 0.742 for logistic regression.
- The research scorecard pairs each score with its main contributing factors (TreeSHAP) and examples of how different inputs could change it (DiCE).

2026
Independent Prototype

Shopee Smart COD & Adaptive Checkout

GitHub

Independent project using simulated orders, with no Shopee affiliation.

- A calibrated random forest estimates delivery failure risk. A FastAPI service combines that estimate with buyer history to select a checkout option, from a reminder to a deposit or prepayment.
- On 3,500 held-out synthetic orders, the model achieved a ROC-AUC of 0.840 and average precision of 0.306.

COMPETITIONS

AIRA & AIFUL / Aihack Thailand 2025

GitHub

- National finalist, team entry. The team modeled 12-month overdue-debt risk using financial ratios and missing-data indicators. Its CatBoost and LightGBM blend scored 0.653 out-of-fold ROC-AUC versus 0.633 for the baseline.

NTT DATA Challenge 2026

Top 24 team with WELLYNC, a healthcare platform prototype.

EDUCATION

Undergraduate
Expected 2028
Bangkok, Thailand

Srinakharinwirot University - B.Eng. in Computer Engineering

- **NHK Spring Scholarship (2026-2027):** 30,000 THB per year.
- **KBTG Data Analyst Assessment (STAMP):** 97/150, above the report average of 90.
