Sivakorn Khundilokrattaya

3rd-Year Computer Engineering Student · Seeking Data Science, ML & Quantitative Fintech Internship

Bangkok, Thailand | sivakorn.khun@gmail.com | svkhun.vercel.app | github.com/svkhun | LinkedIn | Kaggle

EDUCATION

2024 – Present
Expected 2028
Bangkok, Thailand

Srinakharinwirot University (SWU) – B.Eng. in Computer Engineering

Statistical ML, Credit Risk & Explainable AI · Coursework: ML, Statistics, Databases, DSA

- **NHK Spring Scholarship (2026–2027):** Awarded 30,000 THB/year corporate engineering grant (GPAX ≥ 2.75) with a planned 2-month summer internship.
- **Assessments (2026):** KBTG Data Analyst STAMP (Score 97/150, Benchmark: 90) and Oxford Placement Test English Proficiency (CEFR B1, Score 51/120).

SKILLS

ML & Risk	LightGBM, CatBoost, XGBoost, Scikit-Learn, PyG (R-GCN), Optuna
XAI & Data	OptBinning, TreeSHAP, DiCE, Python (Pandas, NumPy, SciPy), SQL
Engineering	FastAPI, ONNX, Docker, WebSockets, PostgreSQL, React, Next.js, Git
Languages	Thai (Native), English (CEFR B1 – Oxford), Japanese (Elementary)

PROJECTS

2026
KBTG Top 10 DS

K-NEXUS – FlowSense & TrustGraph (Synthetic Prototype) App / Showcase

PyTorch Geometric (R-GCN), LightGBM, ONNX Runtime, FastAPI, React 18

- Achieved 0.996 PR-AUC with a tabular baseline vs. 0.994 for R-GCN + LightGBM across 1,354 synthetic transfers using a leak-free past-only graph.
- Prevented inaccurate 30-day cashflow forecasts (2,701.6 vs. 313.3 THB baseline MAE) by gating out unvalidated ML for a FastAPI/React rule plan.

2026
Research Prototype

Credit Risk Scoring & Explainable AI (XAI) Decision Prototype GitHub

Python, LightGBM, Optuna, OptBinning (WoE), TreeSHAP, DiCE, FastAPI, Next.js

- Improved loan default prediction from 0.742 to 0.785 ROC-AUC (43.2% KS) on Home Credit data by tuning a 5-fold LightGBM model with Optuna.
- Calibrated probabilities to a 300–850 credit scorecard and built a FastAPI/Next.js dashboard with TreeSHAP reasons and DiCE counterfactuals.

2026
Shopee Challenge

Shopee Smart COD Reliability & Adaptive Checkout Prototype GitHub

Python, Scikit-Learn (Random Forest), Pandas, FastAPI, JavaScript

- Predicted COD delivery failure at 0.840 ROC-AUC on 3,500 held-out synthetic orders (from 50,000 checkouts) via a calibrated Random Forest.
- Modeled 3.58M THB/month in simulated return savings (at 58% RTO reduction) by building a 4-tier deposit policy and FastAPI mobile simulator.

2025
Aihack Finalist

Long Overdue Debtor (LOD) Default Prediction Pipeline GitHub

CatBoost, LightGBM, XGBoost, Optuna, Scikit-Learn

- Lifted 12-month default ranking from 0.633 to 0.653 OOF ROC-AUC on imbalanced loans (~8.3% default rate) by blending CatBoost and LightGBM.
- Captured borrower distress via debt-to-income and utilization ratios, releasing an NDA-safe synthetic pipeline to protect private records.
