Sivakorn Khundilokrattaya

Computer Engineering Student · Data Science & Machine Learning

Building explainable decision-support prototypes in credit risk, fraud review, and e-commerce.

Seeking: Data Science / Machine Learning Internship

Bangkok, Thailand | sivakorn.khun@gmail.com | svkhun.vercel.app | github.com/svkhun | LinkedIn | Kaggle

EDUCATION

Undergraduate
Expected 2028
Bangkok, Thailand

Srinakharinwirot University - B.Eng. in Computer Engineering

- **NHK Spring Scholarship (2026-2027):** 30,000 THB/year engineering grant (eligibility GPAX ≥ 2.75); planned 2-month summer internship.
- **Assessment reports (2026):** Scored 97/150 on SKILLKAMP by KBTG Data Analyst STAMP (report average: 90) and CEFR B1 (score 51) on Oxford Placement.

SKILLS

ML & Data	Python, PyTorch / PyTorch Geometric (R-GCN), LightGBM
Inference	ONNX Runtime, FastAPI
Engineering	React, Git
Languages	Thai; English (CEFR B1, Oxford score 51)

PROJECTS

2026
KBTG Top 10 DS

K-NEXUS - FlowSense & TrustGraph

App / Showcase

- Built a past-only graph; benchmarked no-GNN average precision 0.99640 versus 16D R-GCN + LightGBM 0.99373 on 1,354 synthetic transactions (67 positives). The GNN did not beat the baseline.
- Kept FlowSense ML disabled: the 30-day forecast on 32 synthetic accounts had candidate model MAE 2,701.6 versus baseline MAE 313.3 THB/account-origin. Used history/scenario/abstention plans; ML did not beat the baseline.

2026
Research Prototype

Credit Risk Scoring & Explainable AI

GitHub

- Estimates default risk with 5-fold LightGBM: ROC-AUC 0.7854 versus WoE logistic baseline 0.7420; KS 43.17%. Results are model-development experiments.
- Maps probabilities to a 300-850 scorecard (Base 600, PDO 20), with TreeSHAP and DiCE views. Mapping establishes neither probability calibration nor lending approval.

2026
Independent Prototype

Shopee Smart COD & Adaptive Checkout

GitHub

Independent synthetic prototype; not affiliated with or endorsed by Shopee.

- Connects Random Forest with sigmoid calibration to checkout policies: ROC-AUC 0.8400, average precision 0.3056 on 3,500 synthetic holdout COD orders from 50,000 synthetic orders.
- Models 3.58M THB/month potential savings at an assumed 58% RTO reduction, using 5-99 scores and four checkout tiers; no realized savings or real-order validation.

2025
National finalist (team entry)

Long Overdue Debtor (LOD) Prediction

GitHub

- Ranks long-overdue risk with V13 CatBoost/LightGBM: attributed out-of-fold ROC-AUC 0.65333 versus baseline 0.63300 on imbalanced competition data; development experiment.
- Combines financial ratios and missingness in a synthetic example; excludes confidential records. No debt-recovery outcome established.

MORE PROJECTS

Industrial IoT Telemetry & OEE Data Platform (Simulated Telemetry) — GitHub

2026
IoT Prototype

Python, FastAPI, PostgreSQL 15, WebSockets, LightGBM, TreeSHAP, React 18

- Streams simulated sensor readings through FastAPI, PostgreSQL 15 and WebSockets to a React 18 dashboard; hourly OEE combines Availability, Performance and Quality.
- Shows Isolation Forest, LightGBM and TreeSHAP anomaly views; no measured factory throughput, latency or downtime improvement is established.

SWU Open House 2026 Web Platform Enhancement — Case Study

2026
Interface Case Study

Registration guide, faculty carousel, countdown, responsive layout

- Guides registration in three steps alongside a faculty poster carousel, countdown and responsive page hierarchy; no measured visitor or conversion outcome is claimed.

GuardianAI Clinical Frailty Triage Dashboard — GitHub

Dashboard Prototype

React, Vite, Node.js, Tailwind CSS, Thai / English Localization

- Presents example patient profiles, risk-factor views and alert review in a React/Vite and Node.js dashboard; not clinically validated.
- Connects Thai/English care notes, provider assignment and follow-up views; no trained-model performance, latency or patient outcome is established.

HONORS

KBTG Kampus Hackathon 2026 - Top 30 Overall & Top 10 Data Science

Nov 2026

Pitcher, Developer & Concept Lead · Conceived the K-NEXUS product architecture and delivered the stage pitch at Kasikorn Business-Technology Group.

AIRA & AIFUL / Aihack Thailand 2025 - National finalist (team entry)

Dec 2025

Long-overdue debtor modeling competition.

NTT DATA Challenge 2026 - Top 24 team (WELLYNC)

2026

Team recognition. [Project repository maintained by teammate Panupong-xD].

ASSESSMENTS

SKILLKAMP by KBTG - Data Analyst Assessment (STAMP)

Mar 2026

21 March 2026: 97/150; report average 90. Foundations of Data Analysis 20/30; Data Cleaning and Preprocessing 23/30; Exploratory Data Analysis and Visualization 20/30; Data Analysis Techniques and Statistical Methods 16/30; Machine Learning for Data Analysts 18/30.

SKILLKAMP by KBTG - Digital & Performance Marketer (STAMP)

Mar 2026

21 March 2026: 98/150; report average 94. Data-Driven Marketing 21/30; Customer Segmentation and Targeting 16/30; Digital Marketing Analytics 26/30; Data-Driven Content Marketing 19/30; Marketing Strategy and Optimization 16/30.

Oxford Placement Test - English Placement (AUA / Oxford University Press)

Jun 2026

21 June 2026: overall score 51, CEFR B1; Use of English 54/B1, Listening 48/B1.
